

Foot Rest Comparison Chart

The foot rests described on this chart are general purpose, non-industrial products suitable for home, commercial or office use.

Note that tilting and non-locking mean the same thing (the platform always moves freely within an arc determined by the height of the platform); and non-tilting and locking mean the same thing (the platform is secured at the chosen angle and does not move).

If encouraging movement of the feet and legs is a priority, look for a tilting platform with an appropriate range of angle variability. If the objective is to provide a stable, secure base to allow an individual to raise the height of the chair and prevent dangling of the feet, look for a non-tilting platform with appropriate fixed angle settings.

Finally, is it “foot rest” or “footrest”? ErgoCanada uses foot rest to refer to the product in general. When referring to specific models, however, we try to follow the manufacturer’s lead and use the name on the box.
